

PROCAREFUL

PROACTIVE CARE for USERS LIFE

Upcoming events

SIGN UP

Join us to learn how the **PROCAREFUL hybrid care model** will enhance home care services through the integration of advanced technologies. Our presentation will showcase the **web platform** developed by the PROCAREFUL project, which will be tested in 5 pilot sites across Europe.

You will also gain insights from our experiences **training professionals** to utilize this platform, including lessons learned and best practices.

SPECIAL GUEST!

Inaki Bartolome from **MildSight project** will offer another perspective on how digital tools can transform home care services.

WHO IS INVITED

Decision makers, health and social care managers, practitioners working in the field of adult and elderly care and anyone interested.

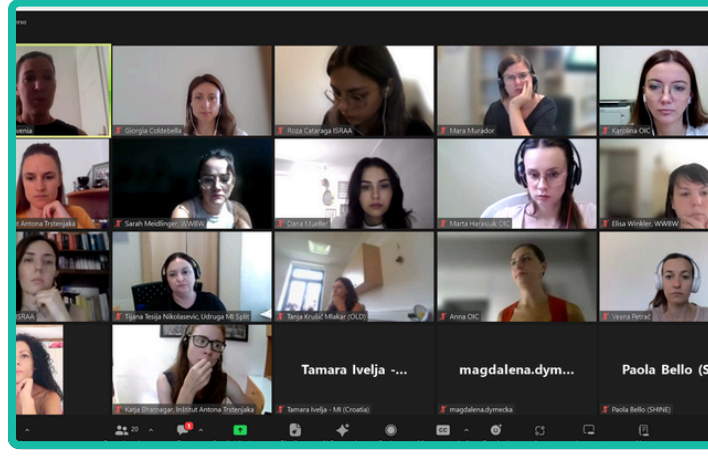

24 September, 2024 at 2:00 p.m. CEST

Free registration!

The webinar will be held in English.

Insights from train-the-trainers activities

In August, project partners and formal carers from various agencies - acting as multipliers - were **trained to train** and mentor the seniors, other formal and informal carers in all **5 pilot sites**.

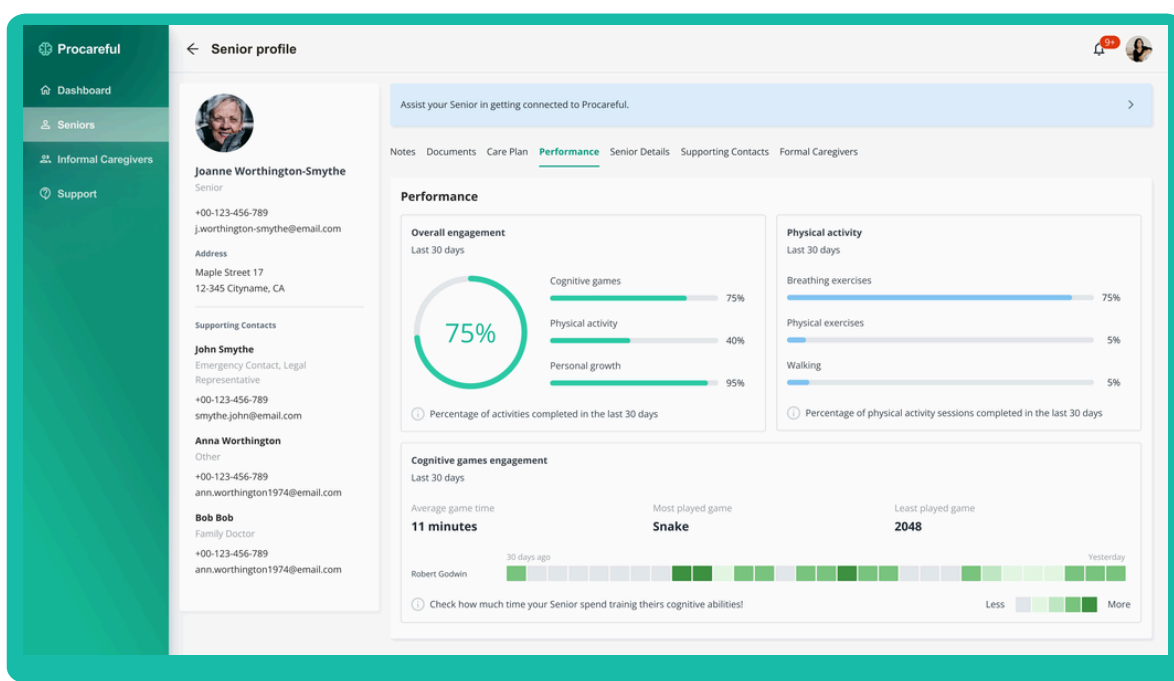

As project partners, we are proud to provide support throughout the testing and the implementation phases of the PROCAREFUL hybrid model.

During the training activities partners stressed how both the **technical** and the **social** components of the model are equally important for a successful implementation of the hybrid model and especially for the well-being of its users at all ends. Particular attention was put on the examination of the **life situation** of the participants, in order to understand their needs and their ethical attitude. In doing so, trainers put the emphasis on the **communication and listening skills** of all parties involved.

The intensive training presented a valuable learning and exchange opportunity for all actors, providing the necessary tools and information to move forward with the implementation phase of the PROCAREFUL model.

PROCAREFUL Web Platform

The consortium has been working on the development of the **online platform** for hybrid care model for over a year. Health practitioners agree that online games, exercise videos and training plans may be a valuable tool to keep the user in good mental and physical condition. The platform will be tested in **5 pilot sites** and may be accessed from **various devices**.
